                                                                                                                                                                                                                                                                                                                                                                                                                                      The IgG1, in its nascent form, bears no sialy1-Lex side chains. The inventors designed a molecule including several such sites for attachment of sialy1-Lex side chains (see AAR2442, FT). The additional N-linked glycosylation sites are introduced at locations which impair complement fixing and Fc receptor binding ability. They are preferably located in the CH2 region of the Ig molecule. Antibodies bearing multiple sialy1-Lex determinants are useful for disrupting undesirable interactions between cells or proteins. Disrupting this interaction has therapeutic applications, for example, in minimising inflammation following tissue injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        99
                                                                                                                                                                                         The gene (AAT60739) encoding 1gG1 (AAW10550) can be subjected to sitedirected mutagenesis in order to introduce one or more N-linked glycan addition sites into the 1gG1 molecule (see also AAW10551). Bukaryotic host cells co-transfected with a vector carrying the the mutated 1gG1 gene and with a vector that expresses an alphatia Stucosyltransferase capable of attaching sialy1-Le(x) groups at the glycosylation sites of the antibody molecule can be used in the prodn. of sialy1-Le(x)-modified antibody. Such an antibody has therapeutic applns. e.g. in minimising inflammation and

The present sequence is used in the course of the specification. The present sequence is used in the course of the specification. The fundant of the specification describes a human antibodies which specification. The cantibodies are used in methods for inducing, augmenting or produce to an antigated antigan-4 (CTLA-4). Such that is useful for treating autoinmune disease the willowing the antibodies of cancer, melanoma or epithelial cancer. The antibodies are cantibody proparation comprising two antibodies of the inducing prostate of the suppressing a immune response in a subject caused or treating cancer, infectious diseases and promoting prostate cancing cancer, infectious diseases and promoting beneficial autoinmune for suppressing a immune response in a parient. They are used for reacting cancer, infectious diseases and promoting beneficial autoinmune of diseases with inflammatory or allergic cancer; and inflammatory or allergic contains and lupus erythematosus, multiple clerosis, insulin-dependent contains are used for disease. The contains a the invention and inflammation, graft versus \$

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 489
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel transgenic nonhuman mammals, particularly rodents, comprising two human immunoglobulin (Ig) loci, where one of two the human immunoglobulin loci is a human heavy chain locus and the other locus is a human light chain locus, and where only one of the loci is of a transchromosome. The transgenic animals are useful for generating a number of B-cell expressing human artibody sequences. They are also useful for producing rearranged immunoglobulin sequences, producing human antibody display libraries, and generating a human sequence antibody that binds to a predetermined antigen. The produced antibodies are useful for treating immune-related disorders. The present sequence represents a plasmid used in the construction of expression vectors for human IgG.

                                                                                                                                                  A novel composition has been developed which comprises an immunoglobulin (1g) having an affinity constant (Ka) of at least 2 multiply 100000000 M-1 for binding to a predetermined human antigen. The present 100000000 M-1 for binding to a predetermined human antigen. The present sequence represents the kappa light chain plasmid pCKY-96 which includes the human gammal constant region and polyademylation site. Anti-CD4 antibodies may be used in therapeutic and diagnostic applications especially for the treatment of human diseases. These antibodies reduce activity of CD4 cells and reduce undesirable autimmune reactions, inflammatory response and transplant rejection. Transplant significant are capable of producing heterologous antibodies of multiple isotypes by undergoing isotype switching. These animals produce a first ig type that is necessary for antigen-stimulated B-cell maturation and can serious antipolate and recode and produce one or more subsequent heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                  63

The present sequence is used in the course of the specification. The specification describes a human antibodies which specifically bind to human cytocoxic T lymphocyte associated antigen-4 (CTLM-4). Such antibodies are used in methods for inducing, augmenting or prolonging an immune response to an antigen in a patient, where the antibodies are block binding of human CTLM-4 to human B7 ligands. The antibodies are also useful for treating autoimmune disease in a subject caused or exacerbated by increased activity of T cells and for treating prostate cancer, melanoma or epithelial cancer. A polyvalent or polyclonal antibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune reactions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia gravis and lupus erythematosus, multiple sclerosis, insulin-dependent contents.
                                                                                                                                                                                                                                           Novel human sequence antibody that binds to human cytotoxic T lymphocyte associated antigen-4, useful for inducing, augmenting prolonging immune response to antigen or for suppressing immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 4723 BP; 1072 A; 1411 C; 1253 G; 987 T; 0 other;

The plasmid is used in the construction of minigenes for expression of 100 plasmid anti-CD4 antibodies, in the transgenic mouse of the invention. The plasmid anti-CD4 antibodies, in the transgenic mouse of the invention.

The specification describes transgenic non-human animals, especially a mouse, which are capable of producing a human heterologous antibodies of multiple isotypes by undergoing isotype switching. The transgenic animals have human heavy and light chain transgenes are capable of functionally rearranging a heterologous diversity (D) gene in a heavy chain transgene comprising at least one V, D and J gene segment, and one constant region gene segment. The immunoglobulin (ig) light chain transgene comprises at least one V and J gene segment, region gene segment. The immunoglobulin (ig) light chain transgene comprises at least one V and J gene segment.

The antibody can be used to prevent efflux of neutrophils from the sequents are labored to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to read to rea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                489
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         549

pBAG101 was designed to carry genomic DNA encoding the human IgG4 heavy chain constant region. The IgG4 DNA was isolated by polymerase chain reaction from human placental DNA using the primer sequences given in AA303097-08. The amplification product of this reaction was approx. 2109 bp. This fragment was inserted into EcoRS linearised pNN03 (see also AAQ3056) to give the intermediate plasmid pBAG101.

This sequence encodes a CD4-gamma2 chimeric heavy chain homodimer.

0.7 kb fragment, and cloned into M13mp18 forming M13mp18 (CD4). This was linearised with Pst1, and the SacII(flush) Pst1 fragment from Dbr gamma2 containing human gamma2 heavy chain (CH1 excn) isolated and ligated to the M13mp18 (CD4) vector. Resulting recombinants were then Streened by restriction analysis for the presence of both CD4 and CH1 which occur in trandem CD4 (BcoR1/Stu1) -CH1 (SacII(flush)/Pst1). CH1 which occur in trandem CD4 (BcoR1/Stu1) -CH1 (SacII(flush)/Pst1). CH1 which occur in trandem CD4 (BcoR1/Stu1) -CH1 (SacII(flush)/Pst1). CH1 heavy chain sequences in frame. The resulting chimeric DNA molecule encodes a protein containing the V1V2 domains of CD4 fused with the correct sequence were then grown in Td1 cells and Rf DNA isolated from the cells. CD4-gamma-2 and CD4-IgG2 chimera(s) and expression vectors - for treatment; prevention and diagnosis of HIV infection Claim 13; Fig 4; 90pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents the CD4-IgG2 chimeric heavy chain nucleotide sequence from the CD4-IgG2 chimeric heterocetramer. The invention relates to an immunoconjugate comprising a cytotoxic radionuclide and a heterotetramer of two heavy chains and two light chains. The cytotoxic radionuclide is linked to either the heavy chains or the light chains, or chains are chimeric CD4-IgGalfc-pacCWV (ATC7 CF191) and both light chains are chimeric CD4-kappa chains are chimeric CD4-KDC-pRCCWV (ATC7 75194). CD4 is a con-polymorphic cell surface glycoprotein that is expressed on the surface of helper T lymphocytes, cells of the monocyte/macrophage lineage and dendritic cells. CD4 sociates with major histocompatibility complex and dendritic cells. CD4 surface of antigen presenting cells to mediate efficient cellular immune response interactions. In humans CD4 is the target of interaction with the human immunodeficiency virus HIV. The immunoconjugate is used to kill cells infected with HIV, and for treating construction in the immunoconjugate is used to kill cells infected with HIV, and for treating construction in the immunoconjugate is used to diffection, and for assessing efficiency of treatments). The immunoconjugate is the target of determined the HIV construction is used to interaction, and for assessing efficiency of treatments). The immunoconjugate is also used to determine the HIV construction is used to interaction is used to interaction is used to interaction is used to interaction is used to interaction is used to interaction is used to interaction is used to interaction is used to interaction is used in the interaction is used to interaction is used to interaction is used to interaction is used to interaction is used to interaction is used to interaction is used in the interaction is used to interaction is used to interaction is used to interaction is used in the interaction is used in the interaction is used in the interaction is used in the interaction is used in the interaction is used in the interaction is used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 44, Appl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2
